MODEL 105 END-FIRE GLIDE SLOPE (EFGS) ANTENNA CATEGORY I/II INSTRUMENT LANDING SYSTEM

THE EF-9 INTERFACE UNIT PROVIDES
POWER DISTRIBUTION AND
MONITORING FOR THE ANTENNA
SYSTEM

(Designed to be Easily Adapted to any
Transmitter & Monitor Electronics)

(Rear Antenna Shown)

**A PROVEN FRANGIBLE SUPPORT
STRUCTURE**

Have you been told that you cannot get ILS service at your airport because the site is too difficult? Throw that old report away! We don't believe it and let us tell you why!

End-Fire antennas can offer numerous benefits over conventional image systems:

*Significant Cost Savings by Avoiding Expensive
Ground Plane Conditioning.*

*Provide ILS Service where Previously not Possible
or Cost Effective due to Terrain.*

*Proven Frangible Low-Profile Design Permitting
"Next to Runway" Installation.*

*Save the Wetlands or Avoid High Wetland Reloca-
tion Costs.*

*Waterside Installations Since the Signal is not
Degraded by Tidal Variations.*

**Precision Glide Path Guidance is Achieved with
Narrow Lateral Radiation Patterns that Reduce Multi-path Signals from Buildings or Mountainous Terrain.**

What About Improvements to Airport Efficiency?

The End-Fire Critical Area Size is Substantially Smaller & can mean more operations per hour!
